Job Description Analysis

Target job description: parsed successfully

Similar job descriptions analysed: 3 (of 3 provided)

Note: Only 3 similar job description(s) were usable (out of 3 provided). For more reliable frequency analysis, 5-10 is recommended, but the analysis will proceed with what's available.

Evidence Matrix

For every requirement identified across the job description(s), this table shows how often it appeared, how the target role framed it, and whether your CV provides genuine evidence for it.

Requirement	JD Frequency	Target JD	CV Evidence	Source
Excel	3/3	required	YES	skills
Healthcare/NHS data experience	3/3	preferred	TRANSFERABLE	projects
Power BI	3/3	required	YES	experience
SQL	3/3	required	YES	experience
Continuous improvement	2/3	competency	NO	-
Degree-level education	2/3	required	PARTIAL	education
Patient/public focus	2/3	competency	NO	-
Python	2/3	preferred	YES	skills
Stakeholder communication	2/3	required	YES	skills
Teamwork	2/3	competency	NO	-
Analytical thinking	1/3	competency	NO	-
Attention to detail	1/3	-	NO	-
Dashboards	1/3	required	YES	experience
Data quality	1/3	preferred	YES	experience
R	1/3	-	NO	-

Gap Analysis Summary

High priority gaps: none — every required item has at least some evidence.

Needs stronger evidence:

- Degree-level education: You have some evidence for Degree-level education in your education section, but it may be worth strengthening or confirming it clearly supports this requirement.

Transferable evidence:

- Healthcare/NHS data experience: You don't have direct experience with Healthcare/NHS data experience, but your projects section shows related, transferable evidence. Present this honestly as relevant experience — not as direct experience you don't have.

Totals: 7 strong match(es), 1 transferable, 1 needing stronger evidence, 6 genuine gap(s).

Personal Statement (Industry)

I am a data analyst with practical, evidence-based experience across Excel, Power BI, and SQL, and a particular interest in applying these skills within nhs.

My CV lists Excel (advanced) as a skill I use regularly. My work has involved Power BI directly — Designed a Power BI dashboard tracking operational KPIs, reducing manual reporting time by several hours per week. SQL is something I apply regularly. For example, built and maintained SQL queries to support weekly reporting for three internal teams. My CV lists Python (pandas, basic) as a skill I use regularly. My work has involved communicating data insights to stakeholders directly — stakeholder reporting. I've also built relevant experience with healthcare data analysis through independent project work — NHS A&E Public Data Analysis (personal project).

I'm particularly keen to bring this experience to a data analyst role within nhs, where these skills feel especially relevant.

Note: Your Master Statement is designed for reuse across the same role, but individual vacancies may contain specific requirements that are worth addressing separately.

Quality scores — Coverage: 83%, Evidence: 92%, Keyword relevance: 70%, Natural language: 100%.

These scores are internal quality indicators meant to help you review and improve your statement — they are not a guarantee of interview success, and they are not an assessment made by any employer.

CV Optimisation Suggestions

These are suggested wording changes and recommendations based only on evidence already in your CV. Nothing here should be added unless it is genuinely true — review every suggestion, and reject anything that doesn't accurately reflect your experience. Nothing is changed automatically; you decide what, if anything, to use.

Suggested wording changes:

[Healthcare/NHS data experience] Original: NHS A&E Public Data Analysis (personal project)

[Healthcare/NHS data experience] Proposed: NHS A&E Public Data Analysis (personal project) — directly relevant to healthcare data analysis, demonstrating transferable experience I can apply in this role.

[Healthcare/NHS data experience] Reason: Healthcare data analysis is something this role values, and your projects section already contains genuine, relevant evidence. Making the connection explicit strengthens this without adding anything untrue — it still describes a project, not paid employment.

Recommendations:

- Degree-level education: Evidence for 'degree-level education' currently comes from your education section rather than Skills or Experience. If genuinely applicable, consider whether a Skills or Experience bullet could reflect this more directly.

- Excel: 'Excel' currently only appears as a bare skills-list entry. If you have a genuine example of using it, adding a specific bullet under Experience or Projects would make this evidence stronger — but only add this if it's genuinely true.

- Python: 'Python' currently only appears as a bare skills-list entry. If you have a genuine example of using it, adding a specific bullet under Experience or Projects would make this evidence stronger — but only add this if it's genuinely true.

- Stakeholder communication: 'communicating data insights to stakeholders' currently only appears as a bare skills-list entry. If you have a genuine example of using it, adding a specific bullet under Experience or Projects would make this evidence stronger — but only add this if it's genuinely true.

Not addressed (no evidence in the CV — do not add without genuine experience): Analytical thinking, Attention to detail, Continuous improvement, Patient/public focus, R, Teamwork
